Setup Learning Environment

OpenTelemetry Foundations: Your Guide to Observability

Download and install/setup following:

1. Microsoft Visual Studio Code

Link: https://code.visualstudio.com/download

2. Docker Desktop

Link: https://docs.docker.com/desktop/

3. OpenJDK

> **Note**
>
> I use the Microsoft Build of OpenJDK which provides support for Windows, macOS and Linux. You are welcome to use the latest version from https://openjdk.org/ instead if preferred.

Link: https://learn.microsoft.com/en-us/java/openjdk/download

4. Apache Maven

Link: https://maven.apache.org/download.cgi

5. Python

Link: https://www.python.org/downloads/

6. hello-telemetry App

Link: https://github.com/brainbsod/hello-telemetry

7. OpenTelemetry Astronomy Shop Demo

Link: https://github.com/open-telemetry/opentelemetry-demo

8. Visual Studio Code - Extensions (Optional)

- Python (from Microsoft)

- Docker (from Microsoft)
- Maven for Java (Microsoft)
- IntelliCode (Microsoft)

9. Add Java, Maven and Python to PATH

General guidance:

- Windows Guide: https://www.howtogeek.com/118594/how-to-edit-your-system-path-for-easy-command-line-access/
- Linux Guide: https://www.howtogeek.com/658904/how-to-add-a-directory-to-your-path-in-linux/
- macOS Guide: https://mac.install.guide/terminal/path
